HKIE Electronics Division Activity Report

Visit to the Two International Finance Centre

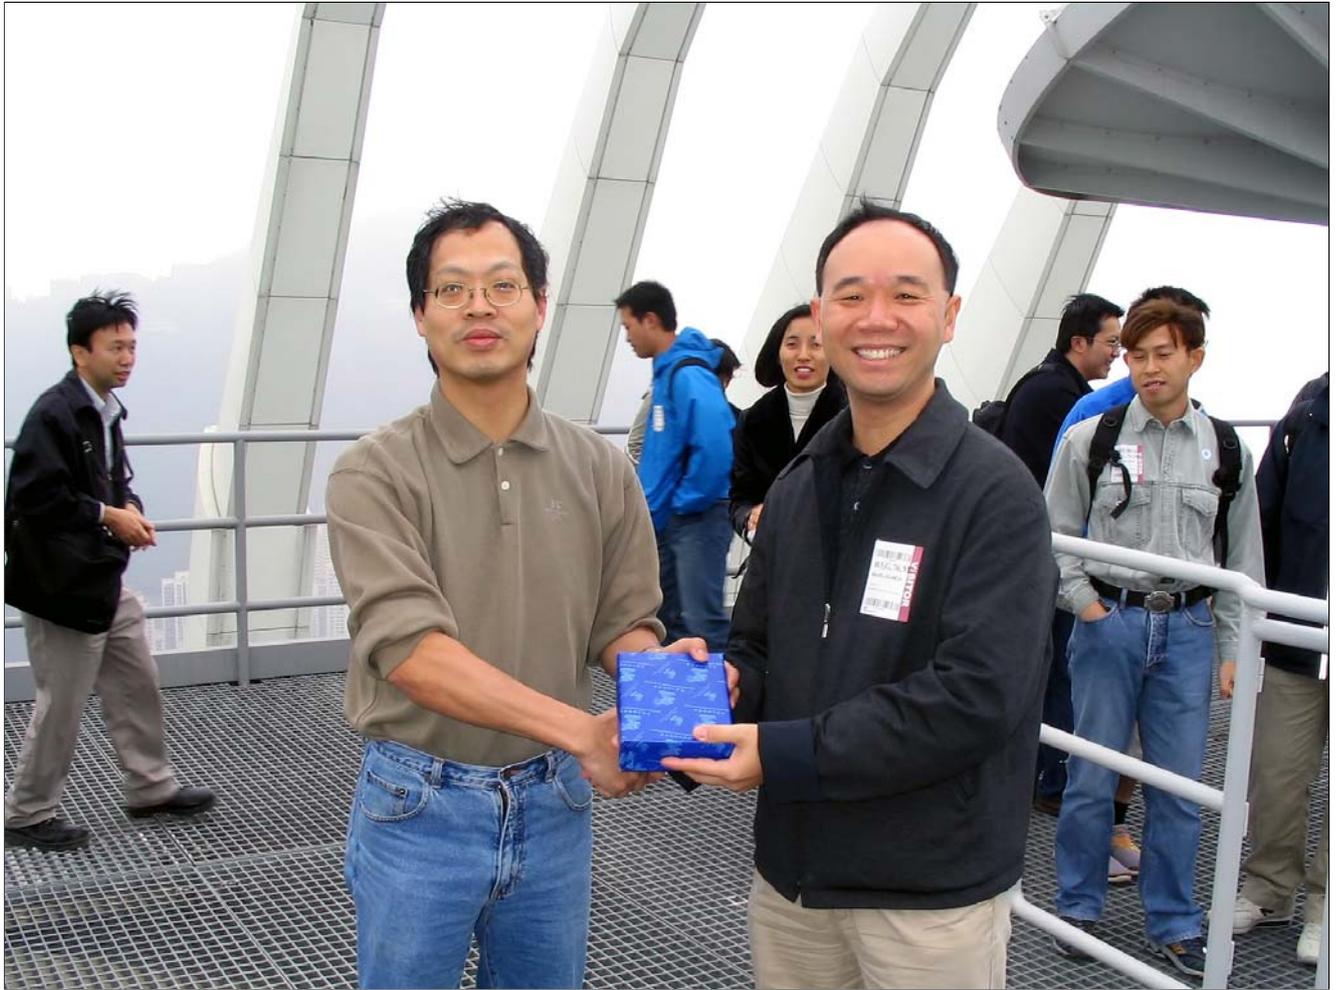

Group photo of members in IFC II Technical Visit

On 10 th January 2004 (Sat), the Electronics Division organized a technical visit for over 30 members to the Two International Finance Centre (IFC II), which is the tallest building in Hong Kong . IFC II, being lit by Thorn Lighting, is Grade-A building which is 420 metres in height, and comprises an 88-storey office tower, a 47,000 sq m four-level podium shopping mall, and a five-level basement housing a train station concourse and car-park.

This superstructure has implemented a number of state-of-the-art engineering systems and innovative ideas, which are extremely challenging to the engineers. The visiting team appreciated very much to Albert To, Technical Director of J. Roger Preston Limited, who had kindly conducted a technical briefing in the IFC II and its different construction phases. During the visit, various engineering facilities systems were also demonstrated, including telecommunication facilities and satellite services, building management system, Ethernet-based security system, typical office and mechanical floor layout, BMS room and video wall for monitoring of M&E systems. Participants were impressed by visiting various advanced facilities, and also had the chance to experience the fast vertical transport system via going to the roof of the building where the satellite system is presented together with the beautiful scenery of Hong Kong .

The visit was very interesting and fantastic, and at the end of the visit, all members had taken a group photo, and our immediate past chairman, Ir Jolly Wong also presented the souvenir to Albert TO to express our sincere thanks for providing such great event.

Ir Jolly Wong [R], immediate past chairman of Electronics Division, presented the souvenir to Albert TO [L], Technical Director of J. Roger Preston Limited
