

## HKIE Electronics Division Activity Report

**Seminar on "IP Communications"**

Presentation by Mr. David Chan

Dr Li CK (L), Chairman of Electronics Division presented souvenir to the speaker Mr. Chan David ( R )

On 9 th February 2004 , the Electronics Division organized a technical seminar on the "IP Communications" and had invited the speaker Mr. David Chan, Sales Manager of Cisco Systems (HK) to give a talk on the latest technologies on the development. Mr. David Chan, our honorable guest, opened the talk by providing an overview on the IP Telephony and its basic building blocks which involve Client, Infrastructure, Call Processing, and Applications. Further details were continued on the component of IP Phone, Campus Infrastructure, Call Manager, and Voice Messaging. David also explained the concept of Fiber Channel over Internet Protocol (FCIP) and iSCSI used for Storage Networking. Under this scheme, file and database system for corporate will be stored remotely in order to reduce cost and integrate midrange storage into DR implementation.

The seminar was ended with a question-and-answer session, and souvenir was presented by Ir Dr Li C K to express the sincere thanks to the speaker for his valuable time and effort in delivering such valuable talk.
